Art Unit: 1625

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Courtet et al. It discloses performing the instant preparation of the monoketal of cyclohexane1,4-dione using a diol of the instant formula, i.e. ethyleneglycol. The only difference is that benzene is used instead of a halogenated organic solvent. See p. 1494, col. 1, third complete paragraph. However solvents such as the instantly used methylene chloride are commonly used in formation of ketals as shown by Roques et al. See p. 1-5 especially p. 5, lines 20-26. Thus the ordinarily skilled worker in the art would have found the instant process to be obvious.

Applicants should present their foreign priority papers.
